DETAILED ACTION

Claims 1-16 were presented for examination and are allowed.

Oath/Declaration

The Oath filed 09/29/2006 complies with all the requirements set forth in MPEP 602 and therefore is accepted.

Drawings

The drawings submitted 09/29/2006 are accepted.

Specification

The specification filed 09/29/2006 is accepted.

Reasons for Allowance

Claims 1-16 are allowed. The following is an examiner's statement of reasons for allowance:

For example, independent claim 1 teaches a base band signal generating device comprising: base band signal generating means for converting data consisting of bit strings, in which at least a part of the bit strings is distinguished as a protection object portion, into a base band signal representing a sequence of symbols of four values; and communication quality judging means for judging whether a communication quality of an external transmission path for transmitting the base band signal has reached a predetermined standard, wherein the base band

signal generating means operates, in a state in which it is judged that the communication quality of the transmission path has not reached the standard, to convert the data into the base band signal such that at least a part of the symbols belonging to the sequence of the symbols includes a bit belonging to the protection object portion and a predetermined redundant bit, and operates, in a state in which it is judged that the communication quality of the transmission path has reached the standard, to convert the data into the base band signal such that at least a part of the symbols belonging to the sequence of the symbols includes a bit belonging to the protection object portion and additional data converted into the base band signal together with the data, and wherein a value of the redundant bit is set to a value that makes an instantaneous value of a point representing the symbol including the redundant bit in the base band signal always converge to a maximum value or a minimum value among four values to which the instantaneous value can converge. The foregoing limitations are not taught by the prior arts of record. Particularly, none of the prior arts teach or suggest, "...a protection object portion, into a base band signal *representing a sequence of symbols of four values*; and communication quality judging means for judging whether a communication quality of an external transmission path for transmitting the base band signal has reached a predetermined standard, wherein the base band signal generating means operates, in a state in which it is judged that the communication quality of the transmission path has not reached the standard, *to convert the data into the base band signal such that at least a part of the symbols belonging to the sequence of the symbols includes a bit belonging to the protection object portion and a predetermined redundant bit, and operates, in a state in which it is judged that the communication quality of the transmission path has reached the standard, to convert the data into the base band signal such that at least a part of the*

symbols belonging to the sequence of the symbols includes a bit belonging to the protection object portion and additional data converted into the base band signal together with the data, and wherein a value of the redundant bit is set to a value that makes an instantaneous value of a point representing the symbol including the redundant bit in the base band signal always converge to a maximum value or a minimum value among four values to which the instantaneous value can converge.”

Independent claims 2, 3, 11, 12, 13, 14, 15 and 16 recite allowable limitations as well and therefore are allowed. Dependent claims 4-10 depend from allowable independent claims and therefore are allowed as well.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
